Sequences AAS59506-AAS59804 represent DNA molecules encoding propionibacterium acmes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acmes. The disorders include SAPHO syndrome (synovitis, acme, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acmes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acme vulgaris. A method for detecting the presence or absence of P. acmes in a

The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). This sequence encodes the polypeptides shown in AAUS9255-AAUS9404 and AAUG7601-AAUG7602.
Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIFO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Leishmaniasis; Leishmania antigen; immunostimulant; protozoacide; Ldp23; interleukin-15; PCR primer; Lbhsp83; M15; Lt-1; LbeIF4A; Lmsp1a; Lmsp9a; MAPS-1A; LmgSP1; LmgSP3; LmgSP5; LmgSP8; LmgSP9; LmgSP1; LsgSP1; S; LcgSP1; LcgSP3; LcgSP4; LcgSP8; LcgSP10; IG6-34; IE6-44; 4A5-63; IB11-39 2A10-37; 4G2-83; 4H6-41; 8G3-100.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Leishmania antigen 4G2-83 extended DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 12928 BP; 2564 A;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to polypeptides comprising an immunogenic part of Leishmania antigen. The Leishmania polypeptides and their associated DN sequences, epitopes and fusion proteins are used in the production of compositions used for inducing a protective immune response against leishmaniasis, for prevention and treatment of the disease. The compositions can also be used generally to treat diseases that respond interleukin-15 stimulation. In addition, the products may contain an immunostimulant. The sequences represent cDNA molecules encoding Leishmania antigens and PCR primers used to amplify DNA of the invention

They are also used diagnostically to detect PAV antigens and/or nucleic acid. The vectors may be used in human or veterinary medicine, but particularly for expressing protective determinants of porcine pathogens. Regulatory regions may be used to control expression of heterologous genes. Antibodies raised against PAV-3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        a defective recombinant PAV vector comprising inverted terminal repeats (ITR), packaging sequences and at least one heterologous nucleotide sequence (II), but lacking El functions. The defective vectors replicate inefficiently in cells (other than helper cells) so are unlikely to be immunogenic. Deletion of the El (and optionally other regions) increases the size of heterologous insert that can be packaged. The PAV-3

                                                                                                                                               The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnostis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and

                                                                                                                                                                                                                           * NOTE: This is a 'working draft' sequence. It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

Quality coverage: 5.38 in Q20 bases; agarose-fp estimation.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 33 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary, Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence.

AC Chicken CHD-W gene (partial sequence continuation; chromodomain Helicase DNA binds GHD-W; chromodomain-Helicase DNA binds GHD-W; chromo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqn-emb1/NA1997.DAT:AAT42754
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /SIDS1/gcgdata/hold-geneseq/geneseqn-emb1/NA2002.DAT:AAD22583 - /SIDS1/gcgdata/hold-geneseq/geneseqn-emb1/NA2001A.DAT:AAS46402 - /SIDS1/gcgdata/hold-geneseq/geneseqn -emb1/NA2000.DAT:AAS46602 - /SIDS1/gcgdata/hold-geneseq/geneseqn -emb1/NA2000.DAT:ABS14118 + /SIDS1/gcgdata/hold-geneseq/geneseqn -emb1/NA2001B.DAT:AAS59590 + /SIDS1/gcgdata/hold-geneseq/geneseqn -emb1/NA2001B.DAT:AAS59590 +
                                                                                                                                       The chicken CHD-W gene (ART42754) acting alone or in conjunction with the closely related CHD-IA gene (ART42751) Is suggested to initiate female development in birds. The sequence of CDH-W was deduced from 2 clones isolated from a 10-day chick embryo library using a fragment of the CHD-IA gene as a probe The CHD-W gene is located on the W chromosome. Probes based on CHD-W and CHD-IA give a W chromosome-specific signal on hybridisation to genomic DNA of a non-rarite bird and can be used for sex determin. of a bird. CHD-W nucleic acids can also be used to control the sex of progeny of a bird.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bird; sex determination; chromodomain-Helicase-DNA binding 1 Avian; CHD^-W; chromodomain-Helicase-DNA binding on the W chromosome; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chicken CHD-W gene (partial sequence).

                                                                                                                                                                                                                                                                                                                                                                                 The chicken CHD-W gene (AAT42754) acting alone or in conjunction with the closely related CHD-1A gene (AAT42751) is suggested to initiate female development in birds. The sequence of CDH-1A was deduced from 3 clones isolated from a stage 10·12 chicken embryo cDNA library using a great tit CHD-W sequence (see also AAT42755) as probe. The CHD-1A (A - Avian) gene shows close identity to the mouse CHD-1 gene (see also AAT42756-57). It is located on an autosome or Z chromosome. Probes based on CHD-W and CHD-1A give a W chromosome-specific signal on hybridisation to genomic DNA of a non-rarite bird and can be used for sex determin. of a bird. CHD-1A nucleic acids can also be used to control the sex of the progeny of a bird.

                                                                                                                                                                                           Bases 3855-3977 (AAT42756) of the mouse CHD-1 gene show homology to portions of the chicken CHD-1A (A = Avian) gene (AAT42757), chicken CHD-W (W refers to the W chromosome) gene (AAT42758) and and the great tit CHD-W gene (AAT42759). Translated amino acid sequences of this region are provided in AAW08146-49. The CHD-1A (see also AAT42751) and CHD-W (see also AAT42751) genes determine sex in birds and can be used to identify the sex of an embryo, foetus etc. and to manipulate the sex of progeny.

                                                                   Bases 3855-3977 (AAT42756) of the mouse CHD-1 gene show homology to portions of the chicken CHD-14 (A = Avian) gene (AAT42757), chicken CHD-W (W refers to the W chromosome) gene (see also AAT42758) and the great tit CHD-W gene (see also AAT42759). Translated amino acid sequences of this region are provided in AAM08146-49. The CHD-1A (see also AAT42751) and CHD-W (see also AAT42754-55) genes determine sex in birds and can be used to identify the sex of an embryo, foetus etc. and to manipulate the sex of progeny.

Bases 3855-3977 (AAT42756) of the mouse CHD-1 gene show homology to portions of the chicken CHD-14 (A = Avian) gene (AAT42757), chicken CHD-W (W refers to the W chromosome) gene (AAT42758) and and the great tit CHD-W gene (AAT42759): Translated amino acid sequences of this region are provided in AAW08146-49. The CHD-14 (see also AAT42751) genes determine sex in birds and can be used to identify the sex of an embryo,
